Comment A (PVC) :  The PVC is restricted to use only for the packing materials. The following is Ricoh Group Green Procurement's standpoint for the PVC use for the products:  Please refer to the latest Ricoh Group Green Procurement Guideline below;  <a href="http://ext.ricoh.co.jp/ecology/guideline/pdf/image_e_ver7.pdf">http://ext.ricoh.co.jp/ecology/guideline/pdf/image_e_ver7.pdf</a>  Ricoh deleted the restriction of use of PVC as stated in the above as "Until now, PVC contained in products is restricted to use since we concerned environmental impact after product disposal and hazardous property of additives. At this time we have reviewed a scope of PVC restricted use by confirming public movement and concern surrounding PVC.  Comment B (Flame retardants in the PCB):  There is a same kind of requirement in the EPEAT criteria 4.1.6.2 :  All printed circuit board laminates included in the product excluding components soldered or affixed to the printed circuit board laminates shall contain no more than 0.1 % weight. (1000ppm) bromine and 0.1 % weight. (1000ppm) chlorine attributable to brominated flame retardants (BFRs) and chlorinated flame retardants (CFRs), with the following exception:				

NOTE B10 A Guidance document on Chemical Emissions is available;  
see <http://www.ecma-international.org/publications/standards/Ecma-370.htm>

NOTE B11 Additional lines may be inserted to declare further items, by positioning the cursor at the far right of the row and hitting the <Enter> key.

. Uses of brominated or chlorinated substances that are not classified as BFRs or CFRs are allowed, but their use shall be documented if the bromine or chlorine content exceeds the applicable threshold.

....

IEC 61249-2-21 establishes limits on elemental bromine (900 ppm) and chlorine (900 ppm), and a combined limit of (1500 ppm.) Demonstration of conformance with the threshold limits established in IEC 61249-2-21 meets the requirements of this criterion.

However, any registered MFP/Printer/Scanner products, 620 products registered as of today including Ricoh/Canon/KonicaMinolta/HP/Xerox/Samsung/Lexmark/Toshiba/Dell/Epson/Kodak/Kyocera, do not comply yet to this requirement. It is said that it seems difficult for the PCB manufacturers to meet this requirement from the technical reasons.

Comment C (Risk Phrase classified flame retardant):

We confirmed the plastic manufacturers and obtained their declarations that the plastic materials used in the products are compliant with the Blue Angel criteria

\*Only flame retardants classified as R53 might be contained as above 0.1%.
